I. INTRODUCTION

Ball Duet is an exciting endless bouncing game in which you touch left to turn the ball left, touch right to turn the ball right, try to match the color of the ball and the pillar below. The game is ready to release straight out of the box, and it can also be easily customized to make it even more engaging to your players. Supports for PC/Mac, iOS, Android, etc! Some highlights:

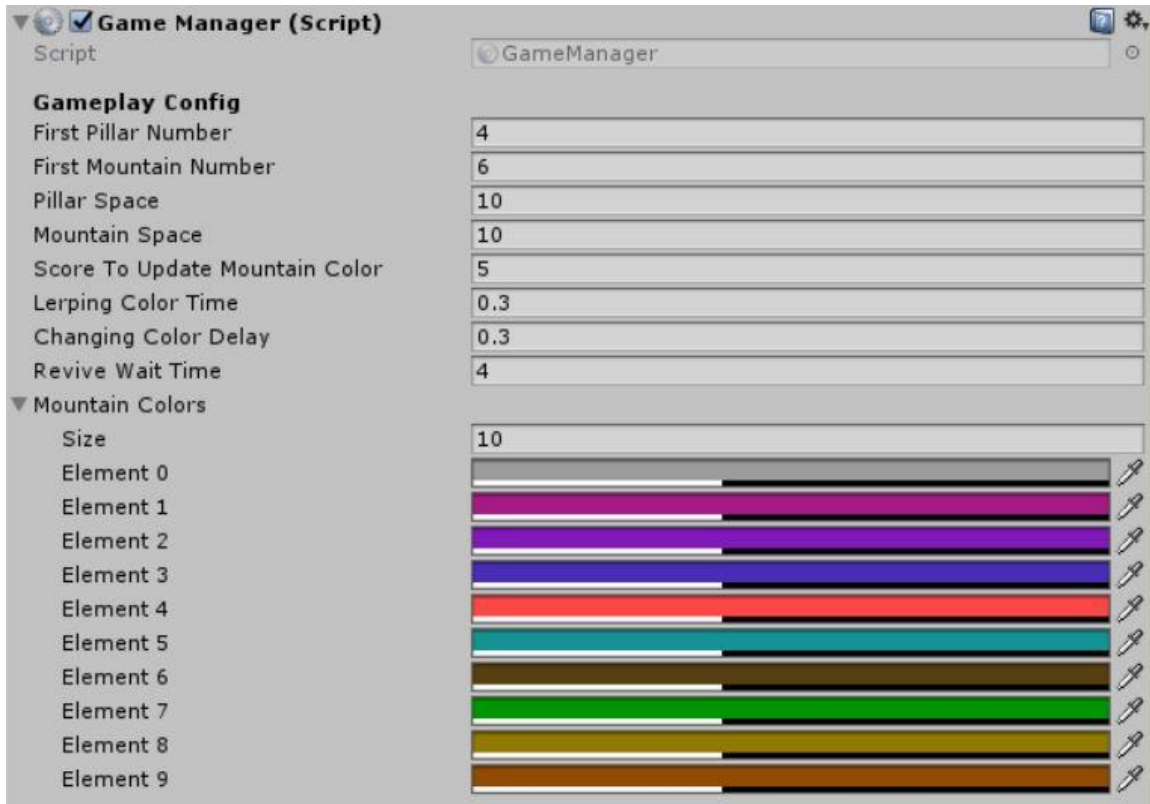

- ❖ Addictive one-touch gameplay
- ❖ Endless game mode
- ❖ Ball's speed increasing base on score
- ❖ Pooling for all objects in the game
- ❖ Share to facebook account
- ❖ Native share Android/IOS
- ❖ Unity Ads and Admob (banner, interstitial and rewarded video)
- ❖ Free-to-use assets (fonts, sounds, music, model, etc.)
- ❖ Optimized for mobile

II. TEMPLATE CUSTOMIZATION

1. Gameplay Tweaking

1.1. GameManager

Most of important gameplay parameters can be configured within the GameManager component which is attached to a game object also named GameManager in the hierarchy.

You can tweak the gameplay by modifying following variables:

- ❖ *First Pillar Number*: the number of pillar object will be created when the game started.
- ❖ *First Mountain Number*: the number of mountain object as background will be created when the game started.
- ❖ *Pillar Space*: the space between each pillar.
- ❖ *Mountain Space*: the space between each mountain.
- ❖ *Score To Update Mountain Color*: the score to change the mountain color.
- ❖ *Lerping Color*: the time for lerping mountain color from the current mountain color to next mountain color.
- ❖ *Changing Color Delay*: the delay time for changing between 2 adjacent mountains.
- ❖ *Revivie Wait Time*: wait time for Revivie feature.
- ❖ *Mountain Colors*: the array color of the mountains.

1.2. PlayerController

The Player object in the hierarchy contains a PlayerController component, in which you can customize the player (main character) behavior.

- ❖ *Max Moving Points Number*: the maximum moving points number of the player. The higher value, the slower player moving.
- ❖ *Min Moving Points Number*: the minimum moving points number of the player. The lower value, the faster player moving.
- ❖ *Score To Decrease Moving Points*: when the game started, moving points of player will be as *Max Moving Points Number*, which mean player moving slow, every time player reach score that divisible for this value, moving points of player will be decrease, which mean player moving faster.
- ❖ *Moving Points Decrease Amount*: the decreasing amount of moving points of player.
- ❖ *Rotating Speed*: the rotating speed of player.
- ❖ *Limit Top*: the highest value when player bouncing up.
- ❖ *Limit Bottom*: the lowest value when player bouncing down.

2. Ad Manager

The AdManager object in hierarchy contains AdManager component, in which you can customize which type of ads you want to use and how you want to show the ads.

In the image, you can see two warnings that tell you Unity Ads Services is disabled and Google Mobile Ads plugin is not imported.

To enable Unity Ads, switch the platform to iOS or Android, then go to Window > Services and select the Ads tab.

In the opened configuration window, click the toggle at the right-hand side to enable Unity Ads service. You may need to answer a few questions about your game.

Now switch back to AdManager inspector.

You can see there's a field called "Unity Ads Config". This is where you can configure unity ad ids such as unity ads id, video ad placement id and rewarded video ad placement id.

To use Admob, go to this link: <https://github.com/googleads/googleads-mobile-unity/releases>, download and import the latest version of Google Mobile Ads plugin into your unity project.

After imported, switch back to AdManager inspector.
